	Train the Trainer
National Vocational Qualifications (NVQ's)	Technical Management Coaching
Business Improvement Techniques (BIT's) Level 2	TPM Network Facilitating
Business Improvement Techniques (BIT's) Level 3	Group Review Facilitating

KCTS

KCTS have been an international provider of specialist World Class Manufacturing (WCM) and Business Improvement Training & Consultancy services for over 10 years.

Our expertise is about delivering Total Productive Maintenance [TPM], Lean processes, Change Management, Leadership Development & Policy Deployment programmes into a number of industries of scale such as; Manufacturing, Aerospace, Chemical, Component Assembly, FMCG, Food & Drink.

KCTS is all about sustaining continuous improvements through an internationally recognised programme of processes and methodologies. Delivered through specialised training workshops these proven methodologies can help reduce costs by identifying and removing losses within a process.

Our Consultancy, Training and Media services are delivered by qualified and experienced personnel, all of whom have significant hands-on business improvement knowledge and therefore understand the necessary procedures required to deliver quantifiable results.

KCTS APPROACH

All KCTS workshops and training programmes are delivered on a basis of “living the experience”, and therefore convey a blend of academic knowledge with a practical experience of the topic, creating a real meaning to the individual.

Candidates are taken through a journey of experience that builds on their confidence and competencies to deliver. The measurable output on all courses is through the development of a real plan which actively encourages the trainees to practically apply the learning in their own environment, and thus immediately focussing for a payback on the training investment.

MEDIA SERVICES

We also offer the availability of our media services department which utilise our unique Mobile Investigation Camera Kit (M.I.C.K.) system.

The kit consists of everything required [cameras, lights, tripods, clamps, strobe, LCD monitor and DVR] for machine or systems process investigation work.

The equipment is fully portable and can be easily moved or separated for hard to access areas.

The Media Service is the actual service hire, purchase of the equipment or the commissioning of a specific project.

The benefits of having this facility, in addition to our training and consultancy support, is the ability to capture problem solving scenarios and then analyse the features or abnormalities of that particular work.
